

STUDENT PERFORMANCE **ANALYSIS**

A REPORT BY-

Shweta Sharma-11505295

Aman Singh- 11510296

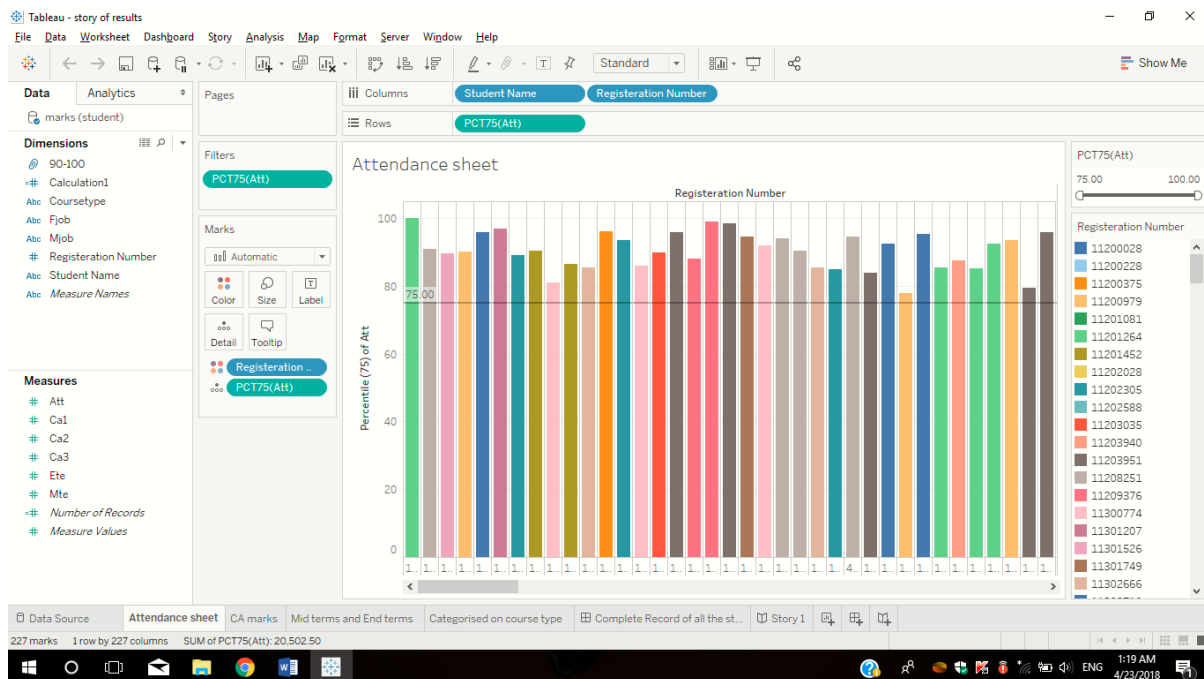

Student performance analysis

Here's the visual representation of the data:

Sheet 1: Attendance sheet

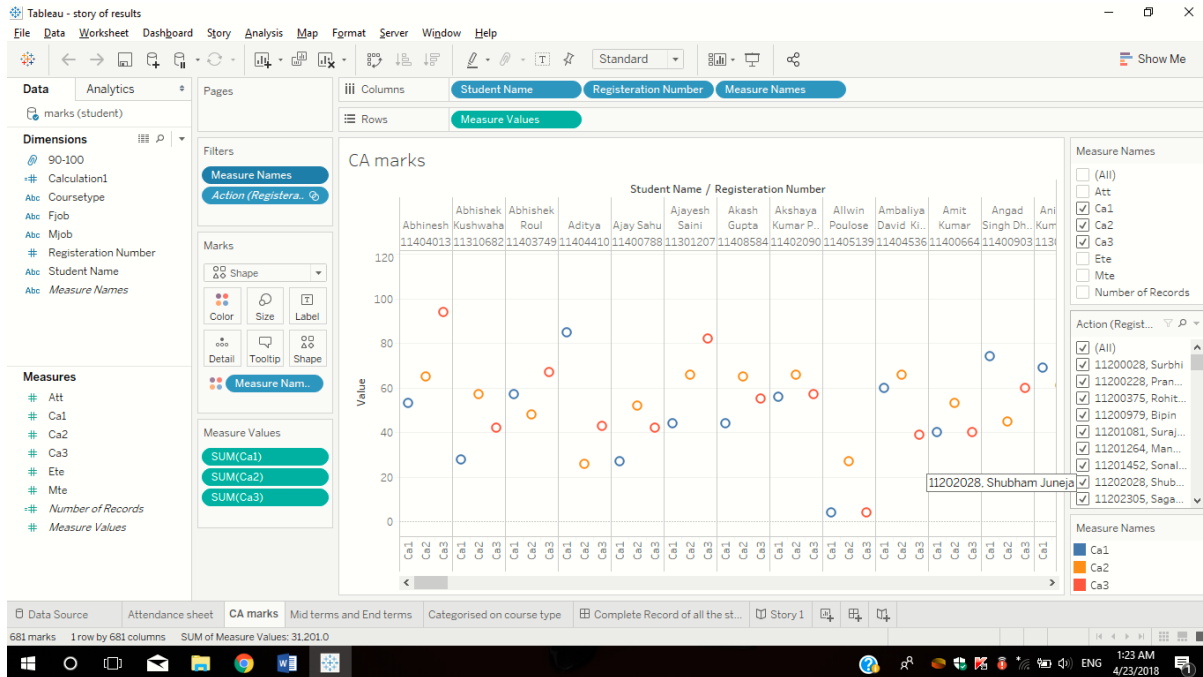

Shows the attendance of every student. The attendance is calculated as in percentage. Minimum threshold is given as 75%.

A slider filter for attendance is given to filter out students based on attendance.

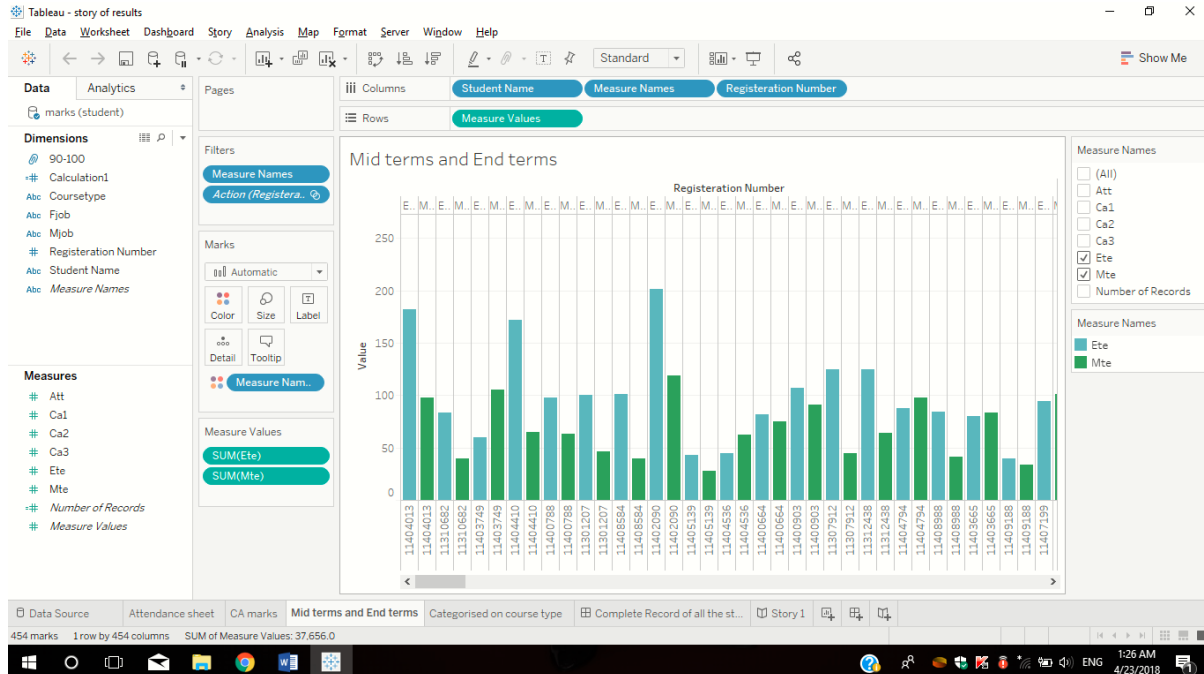

Sheet 2: CA marks

Performance of every student's all 3 CAs can be visualized from this sheet. A filter on measure names and registration numbers has been applied to this sheet.

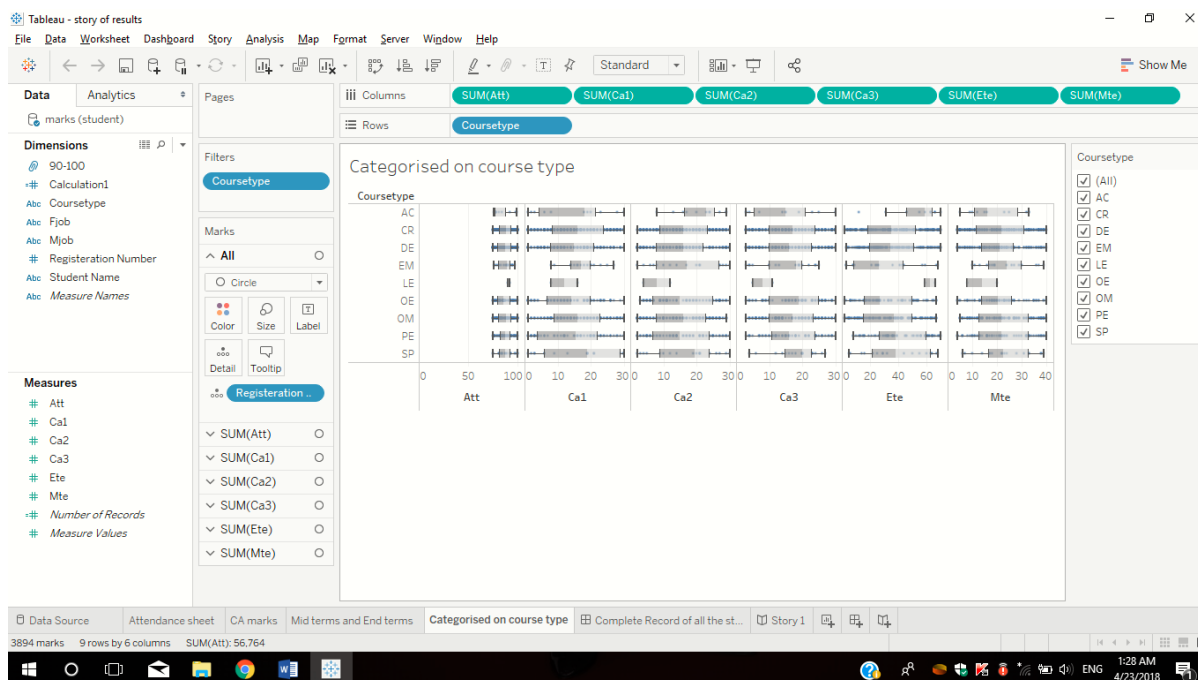

Sheet 3: Mid-terms and End terms

This sheet provides the detailed analysis and visualization of all the student's mid-term and end terms results. A filter on the measure values and registration number has been applied to the sheet.

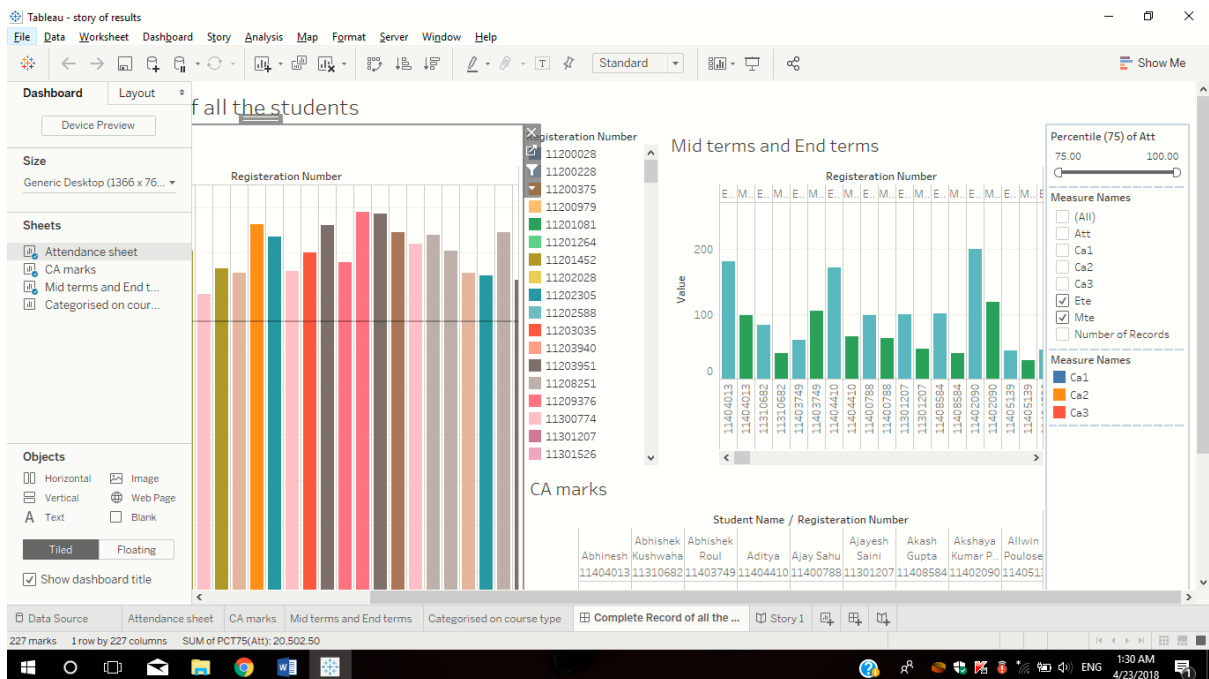

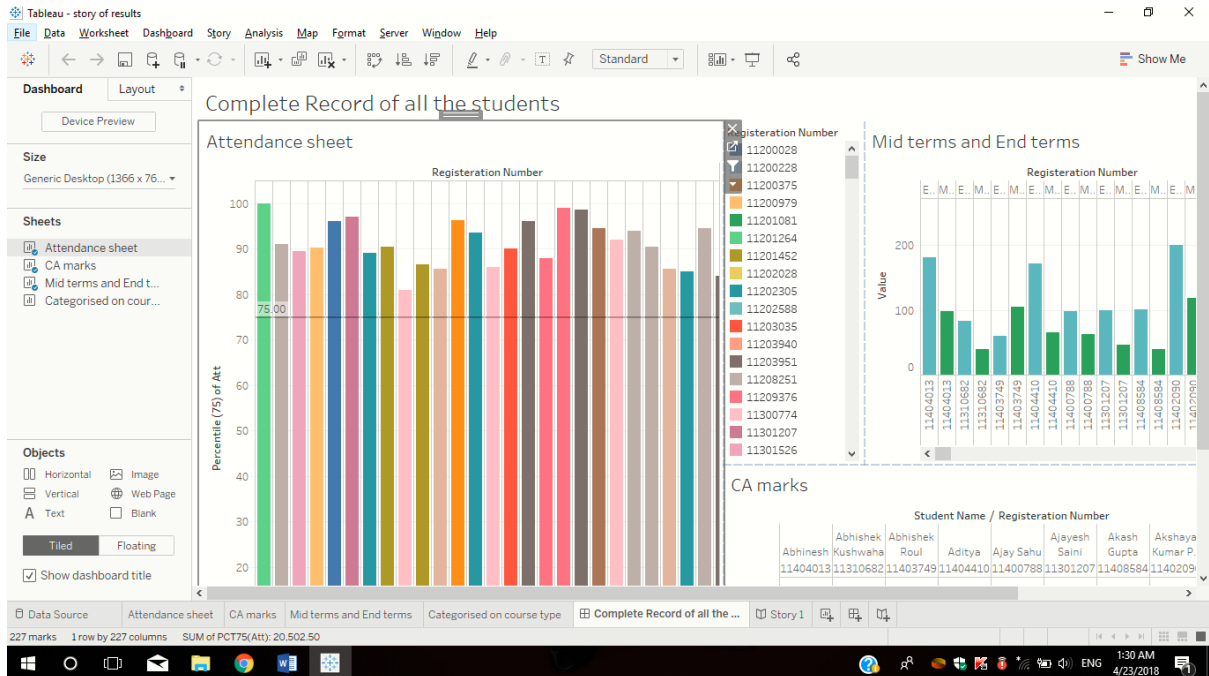

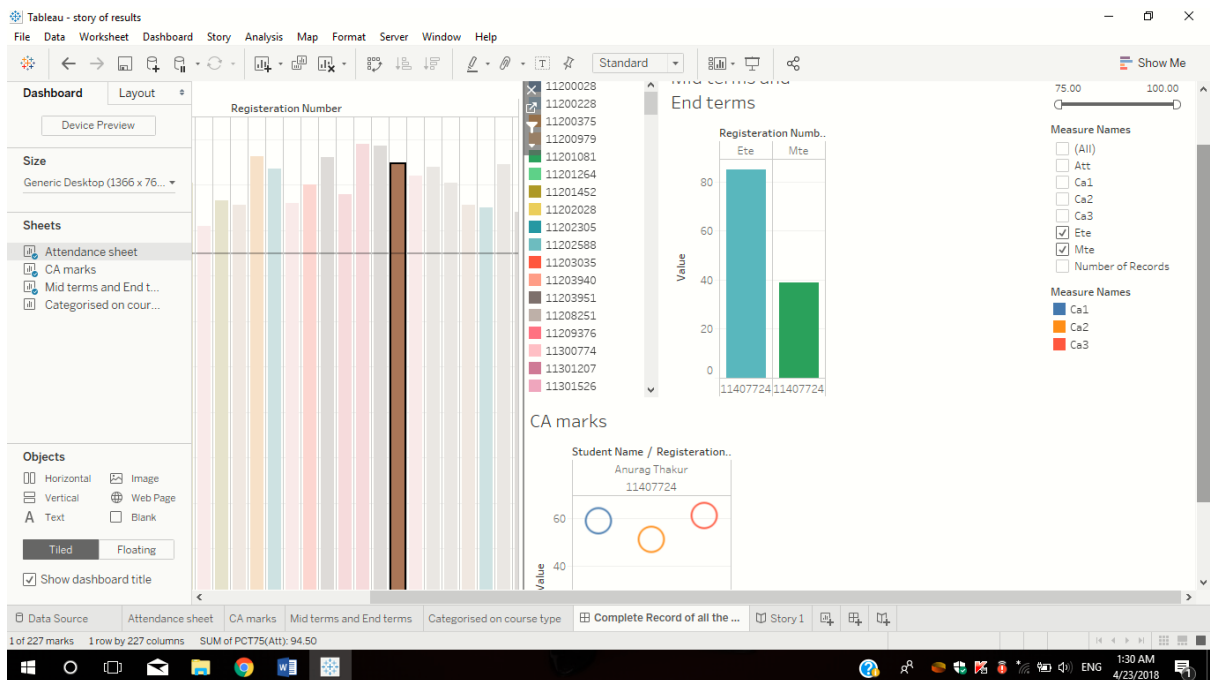

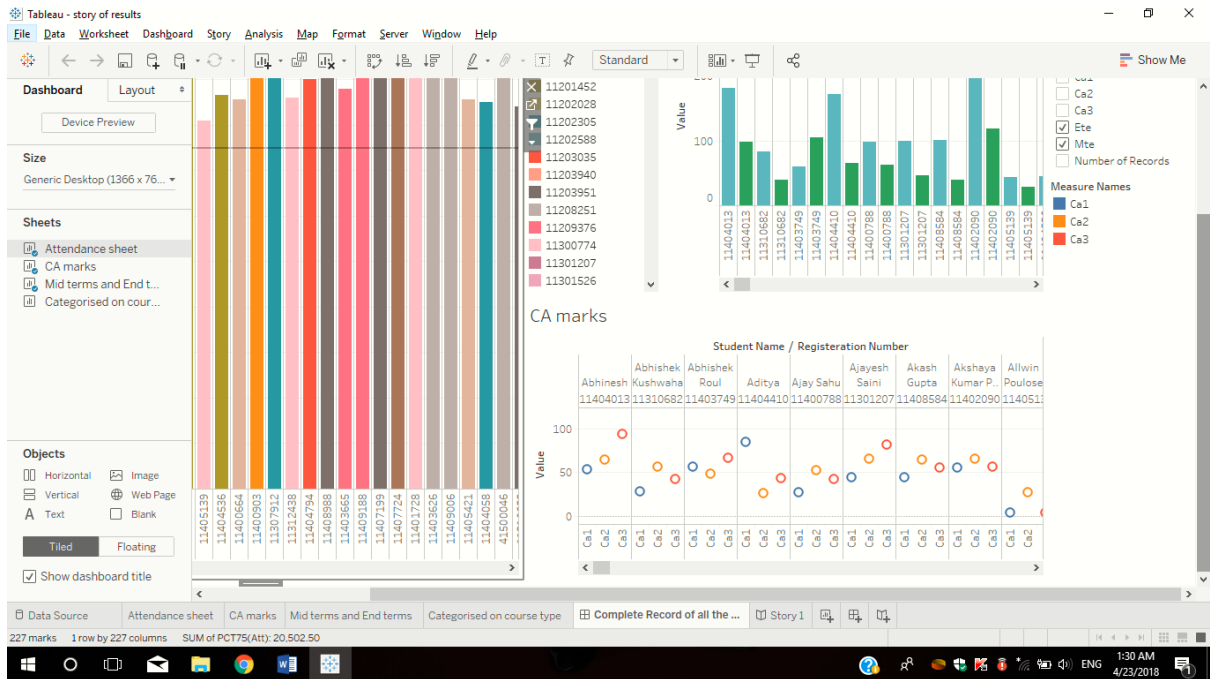

This sheet provides the detailed visualizations on all the course types. Performance of students vary based on different course types. This pattern is observed in the sheet.

Dashboard: Complete record of all the students

The dashboard provides with all the details combined together for all the students' records.

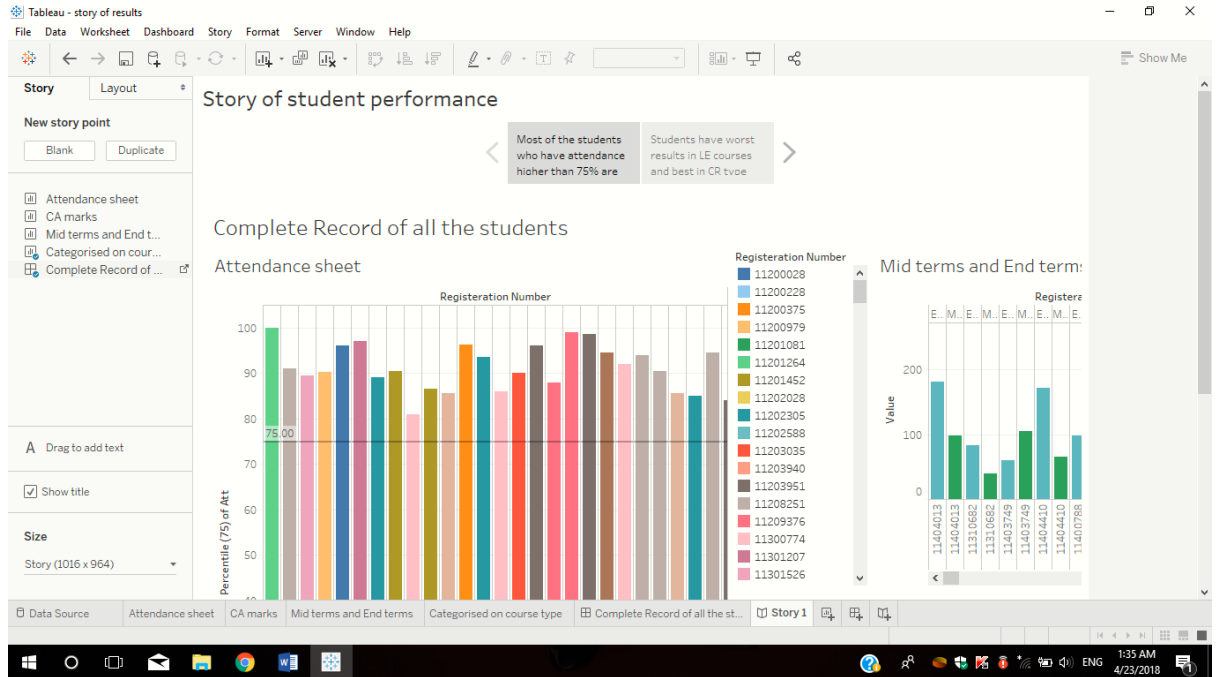

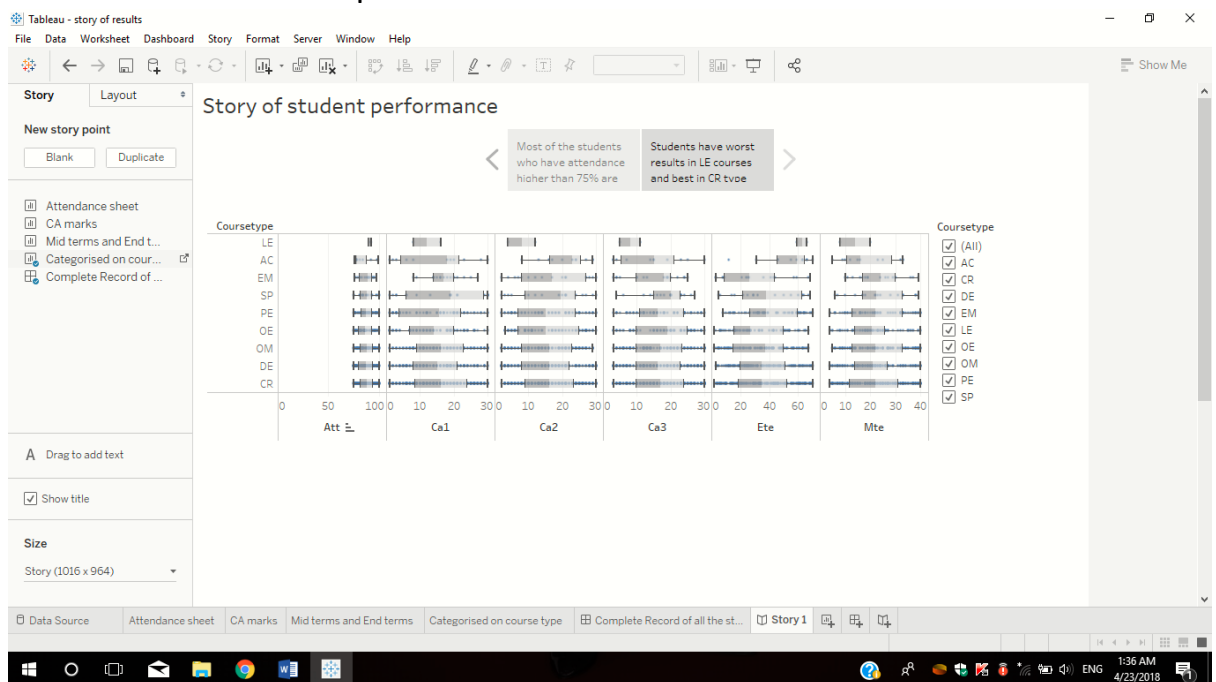

Story: Story of student performance

The story analyses 2 main viewpoints or insights from the given sheets and the dashboards:

- 1) Most of the students who have attendance higher than 75% are tend to perform above average in the CAs, MTEs and ETEs too.

- 2) Students have worst results in LE courses and best in CR type courses.
This depicts the interests of the students.

Analysis within R

Calculated CGPA of each and every student.

The screenshot displays the RStudio environment with the following components:

- Environment Pane:** Lists data objects including CGPA (225 obs. of 11 variables), data (649 obs. of 11 variables), first_backup (649 obs. of 11 variables), focus_group (106 obs. of 9 variables), second_backup (649 obs. of 9 variables), and topper (1 obs. of 9 variables).
- Console:** Shows R code execution for calculating CGPA and identifying the topper student.

```
> max(focus_group$CGPA)
[1] 9.788571
> topper = focus_group[focus_group$CGPA == max(focus_group$CGPA), ]
> topper
  Registration.Number Student.Name CourseType mte ete att max1 max2 CGPA
216      11402326      Mali Prudhvi Reddy    CR  38  69  92   30   30 9.788571
```
- Data Table:** A table with columns: Registration.Number, Student.Name, CourseType, mte, ete, att, max1, max2, CGPA. It shows the first 13 entries of a dataset with 649 total entries.

Analysed which students are eligible for being in focus group with an eligibility criteria where the students have cgpa greater than 6 in CR course type. Also found the number of students in focus group.

The screenshot shows the RStudio interface with the following components:

- Environment Panel:** Lists variables: CGPA (225 obs. of 11 variables), data (649 obs. of 11 variables), first_backup (649 obs. of 11 variables), focus_group (106 obs. of 9 variables), second_backup (649 obs. of 9 variables), and topper (1 obs. of 9 variables).
- Data Viewer:** Displays a table of student data. The first 13 rows are visible, showing columns for Registration.Number, Student.Name, CourseType, mte, ete, att, max1, max2, and CGPA.
- Console:** Contains the following R code and output:

```

      > max(focus_group$CGPA)
      [1] 9.788571
      > topper = focus_group[focus_group$CGPA == max(focus_group$CGPA), ]
      > topper
      Registration.Number Student.Name CourseType mte ete att max1 max2 CGPA
      216 11402326 Mali Prudhvi Reddy CR 38 69 92 30 30 9.788571
      > View(focus_group)
      > |
      
```

Found the topper of the class based on CR course type.

The screenshot shows the RStudio interface with the following components:

- Environment Panel:** Lists variables: CGPA (225 obs. of 11 variables), data (649 obs. of 11 variables), first_backup (649 obs. of 11 variables), focus_group (106 obs. of 9 variables), second_backup (649 obs. of 9 variables), and topper (1 obs. of 9 variables).
- Data Viewer:** Displays a table with 1 entry, showing the top student:

Registration.Number	Student.Name	CourseType	mte	ete	att	max1	max2	CGPA	
216	11402326	Mali Prudhvi Reddy	CR	38	69	92	30	30	9.788571
- Console:** Contains the following R code and output:

```

      > max(focus_group$CGPA)
      [1] 9.788571
      > topper = focus_group[focus_group$CGPA == max(focus_group$CGPA), ]
      > topper
      Registration.Number Student.Name CourseType mte ete att max1 max2 CGPA
      216 11402326 Mali Prudhvi Reddy CR 38 69 92 30 30 9.788571
      > View(focus_group)
      > View(topper)
      > |
      
```

Found out how many no. of students are there in first year, second year, third year, fourth year and how many students out of the record are passed out from the college.

The screenshot shows the RStudio interface. The main editor displays a data table with the following columns: Student.Name, mte, ete, att, max1, max2, Coursetype, REGNO, and Regnum. The table contains 37 entries. The console shows the following error messages:

```

E:/Graduation/sem 6/Big Data Programming Tools INT314/project/
Error in view(passedout) : could not find function "view"
> view(passedout)
Error in view(passedout) : could not find function "view"
> View(passedout)
> |
  
```

The Environment pane on the right shows the following objects:

- best_In_CR: 1 obs. of 9 variables
- best_In_OE: 1 obs. of 9 variables
- best_In_OM: 1 obs. of 9 variables
- best_In_PE: 1 obs. of 9 variables
- best_In_SP: 1 obs. of 9 variables
- CGPA: 225 obs. of 9 variables
- data: 649 obs. of 11 variables

The Help pane on the right shows the documentation for the Normal Distribution, including a description and usage examples.

The screenshot shows the RStudio interface. The main editor displays a data table with the following columns: Student.Name, mte, ete, att, max1, max2, Coursetype, REGNO, and Regnum. The table contains 14 entries. The console shows the following error messages:

```

E:/Graduation/sem 6/Big Data Programming Tools INT314/project/
> view(passedout)
Error in view(passedout) : could not find function "view"
> View(passedout)
> View(firstyear)
> |
  
```

The Environment pane on the right shows the following objects:

- best_In_CR: 1 obs. of 9 variables
- best_In_OE: 1 obs. of 9 variables
- best_In_OM: 1 obs. of 9 variables
- best_In_PE: 1 obs. of 9 variables
- best_In_SP: 1 obs. of 9 variables
- CGPA: 225 obs. of 9 variables
- data: 649 obs. of 11 variables

The Help pane on the right shows the documentation for the Normal Distribution, including a description and usage examples.

Finally found the topper in each course type.

R: The Normal Distribution

Normal (stats) R Documentation

The Normal Distribution

Description

Density, distribution function, quantile function and random generation for the normal distribution with mean equal to mean and standard deviation equal to sd.

Usage

```

dnorm(x, mean = 0, sd = 1, log = FALSE)
pnorm(q, mean = 0, sd = 1, lower.tail = TRUE)
qnorm(p, mean = 0, sd = 1, lower.tail = TRUE)
rnorm(n, mean = 0, sd = 1)

```

Console
